PROFILE SUMMARY

As a senior Software Engineering student at Izmir University of Economics, I specialize in developing high performance solutions across mobile application architectures, computer vision, and deep learning. Highly adaptable to emerging technologies, I actively build projects that integrate machine learning models into edge devices and develop autonomous systems focused on environmental sustainability. I am an analytical problem solver, highly proficient in Agile/Scrum methodologies, and a strong collaborative team player.

EDUCATION

2022 – 2026 **Izmir University of Economics** – B.S. in Software Engineering (GPA: 3.1/4.0)
2019 – 2022 **Deneyap Technology Workshop** – Advanced Technology Education Program
2018 – 2022 **Private Bilfen Science High School** – High School Education

PROFESSIONAL EXPERIENCE

Agrobest Group | SAP Software Intern June 2025 – July 2025

- Developed a centralized ERP automation system using SAP ABAP to track employee lifecycle events (onboarding, role changes, resignations) in real time.
- Designed an integrated communication module using an event driven architecture that triggers automated email notifications to relevant departments during critical HR processes, significantly minimizing operational errors.

PROJECTS PORTFOLIO

AI Powered Autonomous Waste Classification (Bachelor's Thesis) **Ongoing**

An ongoing, sustainability-focused machine learning research project that integrates computer vision with Large Language Models (LLMs) to classify recyclable waste on industrial conveyor belts in real time with high accuracy.

Skin Detect Application and CNN Model **2025**

An edge computing powered mobile diagnostic app capable of detecting over 20 dermatological conditions in milliseconds. The backend is trained on 20,000+ medical images using PyTorch and Ultralytics YOLO, with prediction accuracy further optimized via dynamic patient questionnaires. [\[App Source Code\]](#) | [\[Model Source Code\]](#)

Barwise: Social Cocktail Recipe Sharing Platform **2025**

A social recipe-sharing application featuring a rich UI/UX, built with Dart and Flutter. It leverages asynchronous data streams and modern state management architectures for seamless performance. [\[Source Code\]](#)

MovieSync

2024

A dynamic movie and tv show tracking platform that allows users to build personalized movie and tv show libraries via modern API integrations, synchronize their watch histories, and seamlessly manage their favorite content. [\[Source Code\]](#)

Hotel Scraper

2024

An automated data mining tool built with Python and BeautifulSoup to extract hotel meta-data from Booking.com. Unstructured data is cleaned, processed, and presented through a user-friendly graphical interface. [\[Source Code\]](#)

TECHNICAL SKILLS AND TOOLS

Programming Languages	Python, Java, C#, Dart, TypeScript, JavaScript, SQL, MATLAB
AI and Computer Vision	PyTorch, Ultralytics YOLO, MATLAB Image Toolkit
Frameworks and Architectures	Flutter, Node.js, React, .NET, Java Socket, Asynchronous I/O, Java Swing, Unity
DevOps and Tools	Git, Docker, GitHub, Linux, Windows, VS Code, JetBrains IDEs, Blender
Methodology and Design	Object-Oriented Programming (OOP), Algorithm Design, Data Structures, Design Patterns, AGILE/SCRUM, Web Scraping
Languages	Turkish (Native), English (C2 - Proficient), German (A1)
Interests	Skiing, Playing Guitar, Reading
